

SALES DATA ANALYSIS REPORT

Intern Name : Ankit Chaurasiya

Company : Brainwave Matrix Solutions

Date : 28 April 2025

1. INTRODUCTION

This report presents a comprehensive analysis of sales data for a commercial retail store. The analysis includes insights on sales trends, best-selling products and key business metrics derived using Excel and Power BI.

2. MONTHLY SALES OVERVIEW

Retail sales have been tracked over time to identify monthly and yearly trends. This allows us to observe seasonal patterns and understand fluctuations in customer demand.

Visualization: Line chart comparing Retail vs Warehouse sales over time.

3. PRODUCT CATEGORY OVERVIEW

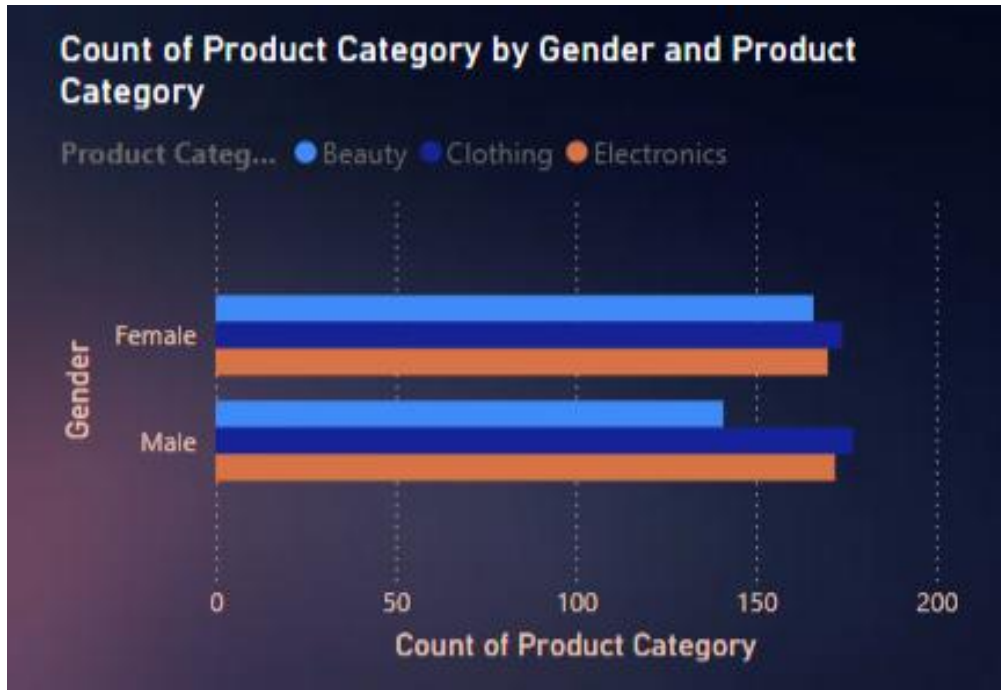

The sales of every product category is viewed through pie chart.

The pie chart shows the percentage of all the 3 category that how much quantity has been sold in each category.

4. GENDER ANALYSIS

This graph shows the gender preference of each category that which gender prefer which product most and gives a clear insight to focus more on which product according to which gender

5. Power BI Dashboard & KPIs

An interactive Power BI dashboard was created to visualize key performance indicators including:

- Total Retail Sales
- Total Unique Items
- Monthly Sales Trends
- Product Performance Table

The dashboard includes slicers for month, gender and item filtering.

6. Insights & Recommendations.

- Investigate low-sales periods for potential improvements.
- Use historical trends for demand forecasting during peak seasons.

7. Tools Used

- Excel for Pivot Table creation and initial data inspection.
- PowerBI for data cleaning and transformation and generating visualizations.
- Power BI for dashboarding and interactive data exploration.
